Petition to Make Special Patent Application

I hereby submit a petition to make special a patent application under MPEP 708.02 Petition to Make Special; 37 CFR 1.102 Advancement of Examination.

Application Number: 10/811,618

Filing Date: 03/29/2004

Applicant: William James Telesco

Title: Controller and resource management System and method with improved Security for independently controlling and managing a computer System

I sincerely believe and hereby declare this patent application to be of special importance in the development of treatments and cures for diseases such as cancer. I sincerely believe and hereby declare this patent application to be of special importance in the development of advanced computer technologies for Countering terrorism.

The present invention provides unmatched security for online medical databases and diagnostic equipment. This technology enables researchers and doctors to share medical data more readily and securely. The applicant has formed a non-profit corporation, HealthPath Research Institute inc. for the purposes of using the

present invention to freely share online the results of all research conducted by HealthPath Research Institute inc. with other researchers in the quest to find causes and cures for cancer and autoimmune diseases. Existing computer systems cannot provide the level of security required for such personal patient information to be accessible online.

Existing computer systems are vulnerable to attack from terrorist organizations. Power grids, medical facilities, transportation, communications, government facilities and financial institutions are exposed to terrorist threats. The present invention provides a secure computing and communications environment for all of these extremely valuable components of our national infrastructure. The applicant has formed a for-profit corporation, Bryte Computer Technologies inc. for the purposes of leveraging the advances this technology offers by developing new computer systems for secure online transactions.

I sincerely believe and hereby declare this patent application to be of special importance for countering terrorism and fighting diseases since this

invention clearly provides a level of security that is impossible to duplicate using prior art computer systems. This invention provides unmatched security by independently controlling and managing all computer resources, including the processors while remaining conceptually, logically, functionally, operationally, physically and electrically separate from all computer system resources including the processors. A new paradigm is introduced providing advanced national and personal security for online transactions, securing computer systems and valuable databases from unsolicited terrorist attacks. I would be remiss in my duties as a citizen of the United States if I were not to highlight the historical importance of this invention given the far-reaching scope and potential lifesaving effects it offers to future generations.

I do solemnly swear or affirm the information herein is accurate to the best of my knowledge at the time of writing on this 3d day of April 2005.

Respectfully submitted

Dr J Telesco 03 April 2005
